

ALPHA

**Commercial Fuel Pump
Heavy Duty**

VECTEC
TOTAL FUEL MANAGEMENT

The ALPHA heavy duty fuel pump has a modern stainless steel cabinet design. Available in two versions, one standard speed and one high speed. Both models are fully electronic so there are no levers, switches or knobs to worry about !

- Pumping Speed: Choose 70 litres per minute version for filling cars, vans and small trucks or 90 litres per minute for filling vehicles with larger fuel tanks, coaches, buses and articulated trucks.
- Accuracy +/- 0.5%: All versions are accurate to +/- 0.5% this is the same as a forecourt petrol pump.
- Display: Single sided electronic display shows up to 99,999.9 litres, the electronic totalizer keeps an ongoing total of fuel used up to 999,999 litres. Dual sided display optional.
- Fully Nozzle Operated: No switches, levers or handles to operate or break. Simply remove the nozzle and the pump starts, replace and the pump stops. Next time you remove the nozzle the display resets.
- Key/Card System Interface: Both versions can easily be interfaced with most existing or new key/card fuel management systems as a 10:1 pulse transmitter is fitted as standard.
- Cabinet: Modern robust cabinet, completely stainless steel to prevent corrosion. Individual parts can be replaced in the unfortunate event of accident damage.
- Simple to Maintain: Good access for service engineers allows for easy and quick maintenance. (Speak to your distributor for maintenance schedule/contract)
- Supplied Complete: 3m outlet hose, ZVA automatic nozzle (remanufactured)
- Options: Breakaway coupling - In the event of a vehicle driving away with the dispensing nozzle still in the vehicle's fuel tank this device breaks apart preventing loss of fuel and damage to the fuel pump.

FOR USE ON BELOW OR ABOVE GROUND STORAGE TANKS. NOT CURRENTLY SUITABLE FOR RESALE OR FOR USE WITH FLAMMABLE FUELS.
